XML schema Key-notes

- Images are included as links e.g.
https://cidoc-crm.org/html/version_images_full_text/images_7.1.2/image_04.png
- The sources of the images for each version are available: <https://cidoc-crm.org/figures>
- Classes and properties declarations follow the exact same format as with the XML provided for declarations in the Encodings column of each stable version
<https://cidoc-crm.org/versions-of-the-cidoc-crm>
- All other model documentation sections (apart from the classes and properties declarations) are compliant with the following schema where each section is split in title/contents/footnotes parts

```
□<!--
section elements include child elements that require
translation (title, contents, footnotes/note).

All attributes of section elements are just used for the
representation of the XML in a format resembling the official
CIDOC-CRM documentation.
@siblingSortOrder determines the relative order of the element
among the elements with the same parentDescriptiveId. It is
set to be optional as it may be preferable to be removed in
order to facilitate comparison.
-->
<!ELEMENT section ((title*, contents*, footnotes?))>

Introduction

This document is the formal definition of the CIDOC Conceptual Reference Model ("CIDOC CRM"), a formal ontology intended to facilitate the integration, mediation and interchange of heterogeneous cultural heritage information and similar information from other domains, as further detailed below. The CRM is the culmination of more than two decades of standards development work by the International Committee for Documentation (CIDOC) of the International Council of Museums (ICOM). Work on the CRM itself began in 1996 under the auspices of the ICOM-CIDOC Documentation Standards Working Group. Since 2000, development of the CRM has been officially delegated by ICOM-CIDOC to the CIDOC CRM Special Interest Group (SIG). The SIG, in turn, collaborates with the ISO working group ISO/TC46/SC4/WG9 to bring the CRM to the form and status of an International Standard. This set of collaborations has resulted in the production of ISO21127:2004 and ISO21127:2014, the ISO standard editions of the CIDOC CRM. This collaboration will be continued in order to support the next update of the ISO standard edition. The present document belongs to the series of evolving versions of the formal definition of the CRM, which serve the ISO working group as community draft for the standard. Eventual minor differences, in semantics and notation, of the ISO standard text from the present, community CIDOC CRM version, which the ISO working group requires and implements, will be harmonized in the subsequent versions of the present, community CIDOC CRM formal definition document.

Objectives of the CIDOC CRM

The primary role of the CIDOC CRM is to enable the exchange and integration of information from heterogeneous sources for the reconstruction and interpretation of the past at a human scale, based on all kinds of material evidence, including texts, audio-visual material and oral tradition. It starts from, but is not limited to, the needs of museum documentation and research based on museum holdings. It aims at providing the semantic definitions and clarifications needed to transform disparate, localised information

Εισαγωγή

Αυτό το έγγραφο είναι ο επίσημος ορισμός του CIDOC Conceptual Reference Model ("CIDOC CRM"), μιας επίσημης οντολογίας που προορίζεται να διευκολύνει την ενσωμάτωση, τη διαμεσολάβηση και την ανταλλαγή επεργενών πληροφοριών πολιτιστικής κληρονομίας και παρόμιων πληροφοριών από άλλους τομείς, όπως περιγράφεται περαιτέρω παρακάτω. Το CRM είναι το αποκορύφωμα των εργασιών ανάπτυξης προτύπων για περισσότερες από δύο δεκαετίες από τη Διεθνή Επιτροπή Τεκμηρίσσης (CIDOC) του Διεθνούς Συμβουλίου Μουσείων (ICOM). Οι εργασίες για το ίδιο το CRM ξεκίνησαν το 1996 υπό την αιγιάλη της ομάδας εργασίας ICOM-CIDOC Documentation Standards Working Group. Από το 2000, η ανάπτυξη του CRM έχει ανατεθεί επίσημα από το ICOM-CIDOC στην Ομάδα Ειδικού Ενδιαφέροντος CIDOC CRM (SIG). Το SIG, με τη σειρά του, συνεργάζεται με την ομάδα εργασίας ISO ISO/TC46/SC4/WG9 για να φέρει το CRM στη μορφή και το καθεστώς ενός Διεθνούς Προτύπου. Αυτό το σύνολο συνεργασιών είχε ως αποτέλεσμα την παραγωγή των ISO21127:2004 και ISO21127:2014, των προτύπων ISO εκδόσεων του CIDOC CRM. Αυτή η συνεργασία θα συνεχιστεί προκειμένου να υποστηριχθεί η επόμενη ενημέρωση της τυπικής έκδοσης ISO. Το παρόν έγγραφο ανήκει στη σειρά εξελισσόμενων εκδόσεων του επίσημου ορισμού του CRM, που εξυπηρετούν την ομάδα εργασίας ISO ως κοινοτικό προσχέδιο για το πρότυπο. Τυχόν μικρές διαφορές, σε σημασιολογία και σημειογραφία, του προτύπου κειμένου ISO από την παρούσα κοινοτική έκδοση CIDOC CRM, την οποία απαιτεί και υλοποιεί η ομάδα εργασίας ISO, θα εναρμονιστούν στις επόμενες εκδόσεις του παρόντος, κοινοτικού επισημου εγγράφου ορισμού CIDOC CRM.

FORTH translations Website:

https://cidoc-crm.org/html/cidoc_crm_v7.1.2_with_translations.html#E53

Problem addressed and Objectives

- Automatic integration of the markdown files of the Fr-Fr translation into the XML file for publication on CIDOC CRM website
- Facilitation of the navigation in the CIDOC CRM documentation (versions, languages etc)
- Integration of the translation information (metadata & paratext)

Integration Workflow for XML

- **Integration for HTML publication**

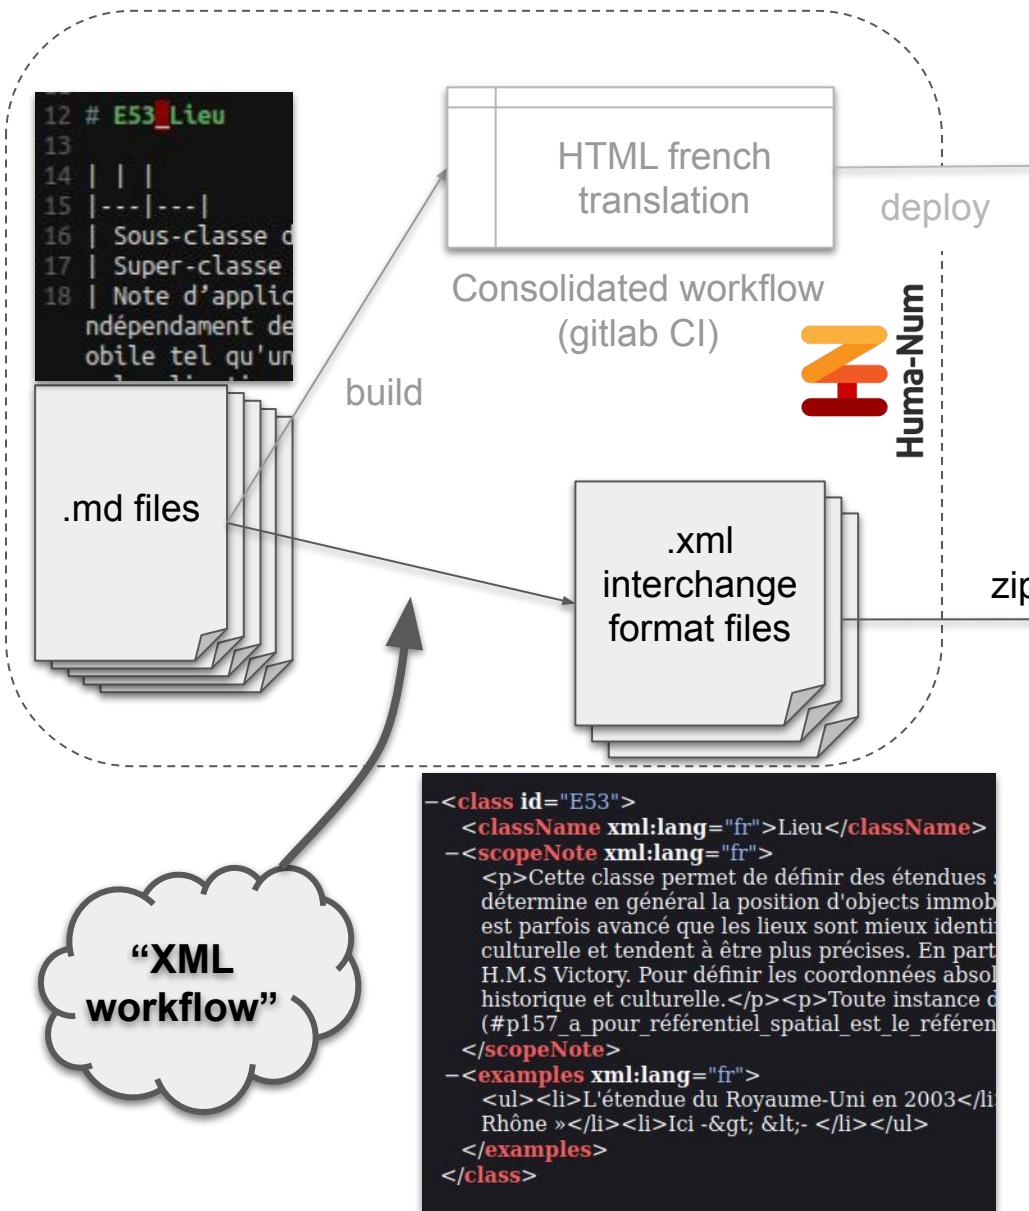

We have previously set up a Continuous Integration (YAML) workflow to build the HTML webpage of the french translation from markdown working files.

- **New : translated text and metadata integration for XML**

We define some script to do similar tasks to convert markdown to XML.

- Step 1/ extract text from .md files and convert in XML (issue #289)
- Step 2/ extract paratext & metadata from issues' documentation (status, issue #285, title, labels, translation notes etc.)

Workflow for XML schema

E53_Lieu	
Sous-classe de	E1_Entity_CRM
Super-classe de	
Note d'application :	Cette classe permet de définir des étendues spatiales, notamment à la surface de la terre, au sens purement physique, indépendamment des phénomènes temporels et matériels. Les implémentations de type E53_Lieu déterminent en général la position d'objets immobiles tel qu'un bâtiment, une ville, une montagne, une rivière, ou un repère géodésique dédié. Un lieu peut-être défini par la combinaison d'une localisation dans un cadre. Il est parfois avancé que les lieux sont mieux identifiés par des coordonnées globales ou des systèmes de référence absolus, mais des références relatives sont souvent plus pertinentes dans le contexte d'une documentation

```
1 > # E53 Place
2
3 > | | |
4 > | --- | --- |
5 > | Subclass of: | E1 CRM Entity
6 > | Superclass of: |
7 > | Scope note: | This class comprises extents in space, in particular on the surface of the earth, in the pure sense of physics: independent from temporal phenomena and matter.<br>The instances of 'E53 Place' are usually determined by reference to the position of "immobile" objects such as buildings, cities, mountains, rivers, or dedicated geodetic marks, but may also be determined by reference to mobile objects. A Place can be determined by combining a frame of reference and a location with respect to this frame.<br>It is sometimes argued that instances of 'E53 Place' are best identified by global coordinates or absolute reference systems. However, relative references are often more relevant in the context of cultural documentation and tend to be more precise. In particular, we are often interested in position in relation to large, mobile objects, such as ships. For example, the Place at which Nelson died is known with reference to a large mobile object - H.M.S Victory. A resolution of this Place in terms of absolute coordinates would require knowledge of the movements of the vessel and the precise time of death, either of which may be revised, and the result would lack historical and cultural relevance.<br>Any instance of 'E18 Physical Thing' can serve as a frame of reference for an instance of 'E53 Place'. This may be documented using the property 'P157 is at rest relative to (provides reference space for)'.
8 > | Examples: | the extent of the UK in the year 2003<br>the position of the hallmark on the inside of my wedding ring (fictitious)<br>the place referred to in the phrase: "Fish collected at three miles north of the confluence of the Arve and the Rhone"<br>here -> <- [the place between these two arrows in one of the reader's paper copy of this document. Each copy constitutes a different place of this spot.]
9 > | In First Order Logic: | E53(x) => E1(x)
10 > | Properties: | P89 falls within (contains): 'E53 Place'<br>P121 overlaps with: 'E53 Place'<br>P122 borders with: 'E53 Place'<br>P157 is at rest relative to (provides reference space for): 'E18 Physical Thing'<br>P168 place is defined by (defines place): 'E94 Space Primitive'<br>P171 at some place within: 'E94 Space Primitive'<br>P172 contains: 'E94 Space Primitive'<br>P189 approximates (is approximated by): 'E53 Place'<br>
11
12 # E53 Lieu
13
14 | | |
15 | ---|---|

18 | Note d'application : | Cette classe permet de définir des étendues spatiales, notamment à la surface de la terre, au sens purement physique, indépendamment des phénomènes temporels et matériels.<br>Les implémentations de type 'E53.Lieu' détermine en général la position d'objets immobile tel qu'un bâtiment, une ville, une montagne, une rivière, ou un repère géodésique dédié. Un lieu peut-être défini par la combinaison d'une localisation dans un cadre.<br>Il est parfois avancé que les lieux sont mieux identifiés par des coordonnées globales ou des systèmes de référence absolus, mais des références relatives sont souvent plus pertinentes dans le contexte d'une documentation culturelle et tendent à être plus précises. En particulier, nous sommes souvent intéressés par des positions d'objets très grand, en mouvement tel qu'un navire. Par exemple, le lieu où Nelson mourut est un grand objet mobile : le H.M.S Victory. Pour définir les coordonnées absolues du lieu de ce décès, il faudrait connaître le mouvement du navire et l'heure précise de la mort, l'un et l'autre étant sujet à être révisé, et le résultat manquerait de pertinence historique et culturelle.<br>Toute instance de [E18_Chose_matiériel](#e18_chose_matiériel) peut servir de cadre à une entité 'E53_Lieu'. Cela peut-être documenté grâce à la propriété [P157](#p157_a_pour_référentiel_spatial_est_le_référentiel_spatial_de) !
19 | Exemples : | L'étendue du Royaume-Uni en 2003<br>La position du poinçon sur la surface intérieure de mon alliance<br>Le lieu indiqué par l'expression : 'poissons péchés à trois miles au nord du confluent de l'Arve et du Rhône'<br>Ici -> <- |

```

français

Step 1 : transformation flow from md files to XML

- Identification of sed REGEX to collect text and create XML tags
 - for classes and properties
 - for texts
- Integration of the transformation in the consolidated workflow (gitlab CI)
 - Shell script with sed operations
 - Zip file building
- Dialog with FORTH routine for CRM SIG HTML semi-automated integration

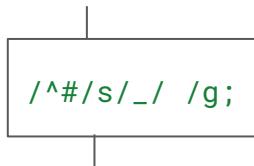

Step 1 : `sed` REGEX substitutions

Examples with CIDOC Classes

Labels

E53_Lieu

E53 Lieu

```
s/^# \(\E[0-9]\+\)\$/<class id="\1"/>;
s/^# \(\E[0-9]\+\) \(\.*\)/<class id="\1">\n\t<className xml:lang="fr">\2</className>/;
```

markdown syntax

sed rules

Scope note

| Note d'application : | Cette classe permet de définir des étendues spatiales, notamment à la surface de la terre, au sens purement physique, indépendamment des phénomènes temporels et matériels.
Les implémentations de...

```
s/^| Note.d[ '']application[ ]*: *|[ ]*\(\.*\)*|/\t<scopeNote
xml:lang="fr">\&lt;p\&gt;\1\&lt;/p\&gt;</scopeNote>/g;
```

```
1 <class id="E53">
2   <className xml:lang="fr">Lieu</className>
3   <scopeNote xml:lang="fr">&lt;p&gt;Cette classe permet de définir des étendues spatiales, mais des références relatives sont souvent plus appropriées. Par exemple, une localisation peut être définie par la combinaison d'une localisation absolue et d'un rapport avec une autre localisation relative. Les implémentations de type 'E53_Lieu' peuvent être utilisées pour décrire des positions d'objets très précis, tels que les positions d'objets dans un navire ou dans un avion. Il est également possible de spécifier des positions relatives, telles que 'à trois miles au nord du cap'.&lt;/p&gt;&lt;p&gt;Les implémentations de type 'E53_Lieu' peuvent également être utilisées pour décrire des positions d'objets très grands, en mouvement tel qu'un navire ou un avion. Il est également possible de spécifier des positions relatives, telles que 'à trois miles au nord du cap'.&lt;/p&gt;</scopeNote>
4   <examples xml:lang="fr">&lt;ul&gt;&lt;li&gt;L'étendue de l'expression : « poissons pêchés à trois miles au nord du cap »&lt;/li&gt;&lt;/ul&gt;</examples>
5 </class>
```

Step 1 : REGEX operations in the XML workflow

Example of sed instructions (.sed) for properties items operated with bash script command (.sh) in XML workflow

```
5 s/^# \(\P[0-9]\+\)\$/<class id="\1"/;
6 s/^# \(\P[0-9]\+\) \(\.*\)\ (\(\.*\))/<class id="\1">\n\t<directName xml:lang="fr">\2</directName>\n\t<inverseName xml:lang="fr">\3</inverseName>/;
7 s/^# \(\P[0-9]\+\) \(\.*\)$/<class id="\1">\n\t<directName xml:lang="fr">\2</directName>;
8 /^[ \t]*$/d;
9 /^[ -]*|[ -]*$/d;
10 /^|.*omaine.*$/d;
11 /^|[ ]*Supe.*$/d;
12 /^|[ ]*Sou.*$/d;
13 /^| Port.*$/d;
14 #/^| Super-pro.*|[ ]*\(\.*\)\ *|\t<superPropertyOf id="\1"/>/g;
15 s/^|.*Quantification.*|[ ]*\(\.*\)\ *[|]*|\t<quantification xml:lang="fr">\&lt;p\&gt;\1\&lt;/p\&gt;</quantification>/g;
16 s/^|[ ]\+Note.d['']application[ ]*: *|[ ]*\(\.*\)\ *[|]*|\t<scopeNote xml:lang="fr">\&lt;p\&gt;\1\&lt;/p\&gt;</scopeNote>/g;
17 /scopeNote/s/<br>/\&lt;/p\&gt;\&lt;p\&gt;/g;
18 s/^|[ ]\+Exemples[ ]*:|[ ]*\|[ ]*\(\.*\)[|]*|\t<examples xml:lang="fr">\&lt;ul\&gt;\&lt;li\&gt;\1\&lt;/li\&gt;\&lt;/ul\&gt;</examples>/g;
19 /examples xml/s/<br>/\&lt;/li\&gt;\&lt;li\&gt;/g;
20 /^|[ ]\+Logique du premier ordre.*$/d;
21 /^|[ ]\+Propriétés.*$/d;
22 /^|[ ]*\$/d;
23 s/|//g;
```

Step 2 : Translation information & metadata

For each item or subitem, the transformation to XML may benefit **information on translation process**.

A new tag or attribute “**status**” may support information using Gitlab API :

- “iid” issue number (#163 for P20, see infra) to get access to **translation notes**
- “state” of the issue (open or close) respective to the **state of the translation adoption flow**
- “title” of issue to set values to proper item CIDOC label
- “labels” relative to the **translated version** for example (CIDOC CRM version, translation steps etc.)

Step 2 : `curl` with GitLab API (json)

GitLab

```
curl --header "PRIVATE-TOKEN: abc-123-def-456"  
"https://gitlab.huma-num.fr/api/v4/projects/380/issues/285" | jq
```

```
curl --header "PRIVATE-TOKEN: abc-123-def-456" "https://gitlab.huma-num.fr/api/v4/projects/380/issues/  
% Total    % Received % Xferd  Average Speed   Time     Time     Time  Current

doc-fr-cidoc-crm/-/issues/156;closed;P56 bears feature;5-Valide,Propriété,v7.1.1,v7.1.2
doc-fr-cidoc-crm/-/issues/155;closed;P55 has current location;5-Valide,Propriété,v7.1.1,v7.1.2
doc-fr-cidoc-crm/-/issues/154;closed;P54 has current permanent location;5-Valide,Propriété,v7.1.1,v7.1.2
doc-fr-cidoc-crm/-/issues/153;opened;P109 has current or former location;3-Traduit en attente de revision,v7.1.1
doc-fr-cidoc-crm/-/issues/152;closed;P65 shows visual item (is shown by);5-Valide,v7.1.1,v7.1.2
doc-fr-cidoc-crm/-/issues/151;closed;P62 depicts (is depicted by);5-Valide,v7.1.1,v7.1.2
```

translation notes :
Gitlab issue URL

state :

- adopted (closed)
- in progress (opened)

labels :

- steps of translation (3 - Traduit ..., 5 - validé etc.)
- type of item (entité, propriété, texte...)
- actual CIDOC version under translation (latest has to be considered)

Conclusions

Main results

- Semi-automated workflow to push adopted french translation on different platform, notably CIDOC CRM website [Work in Progress]
- Tracking the information from the French initiative translation platform
- Cooperative process that benefits both partners

Further work

- Building translation metadata and further informations (translation notes e.g.) as attribute or tag instances of XML interchange format

-> *to be discussed/evaluated*

- Towards a fully automated workflow between fr-fr translation initiative WG to FORTH website
